

Numerical Solution of Elliptic Differential Equations by Reduction to the Interface

Filesize: 9.59 MB

Reviews

An incredibly awesome publication with perfect and lucid reasons. It can be written in simple phrases and not confusing. I am just delighted to let you know that this is actually the very best publication I actually have studied during my very own lifestyle and could be the best publication for actually.

(Paula Gutkowski)

NUMERICAL SOLUTION OF ELLIPTIC DIFFERENTIAL EQUATIONS BY REDUCTION TO THE INTERFACE

To get **Numerical Solution of Elliptic Differential Equations by Reduction to the Interface** eBook, you should refer to the hyperlink beneath and save the ebook or get access to additional information that are in conjunction with NUMERICAL SOLUTION OF ELLIPTIC DIFFERENTIAL EQUATIONS BY REDUCTION TO THE INTERFACE ebook.

Springer Feb 2004, 2004. Taschenbuch. Book Condition: Neu. 235x155x16 mm. This item is printed on demand - Print on Demand Neuware - During the last decade essential progress has been achieved in the analysis and implementation of multilevel/multigrid and domain decomposition methods to explore a variety of real world applications. An important trend in modern numerical simulations is the quick improvement of computer technology that leads to the well known paradigm (see, e. g. , [78,179]): high-performance computers make it indispensable to use numerical methods of almost linear complexity in the problem size N , to maintain an adequate scaling between the computing time and improved computer facilities as N increases. In the h -version of the finite element method (FEM), the multigrid iteration realizes an $O(N)$ solver for elliptic differential equations in a domain $\Omega \subset \mathbb{R}^d$ with $N = O(h^{-d})$, where h is the mesh parameter. In the boundary element method (BEM), the traditional panel clustering, fast multi-pole and wavelet based methods as well as the modern hierarchical matrix techniques are known to provide the data-sparse approximations to the arising fully populated stiffness matrices with almost linear cost $O(Nr \log Nr)$, where $1 \leq Nr = O(h^{-d-1})$ is the number of degrees of freedom associated with the boundary. The aim of this book is to introduce a wider audience to the use of a new class of efficient numerical methods of almost linear complexity for solving elliptic partial differential equations (PDEs) based on their reduction to the interface. 312 pp. Englisch.
