

Geometry, Mechanics, and Dynamics

Filesize: 7.14 MB

Reviews

This book is definitely not effortless to start on reading through but extremely fun to learn. Better then never, though i am quite late in start reading this one. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Aliya Franecki)

GEOMETRY, MECHANICS, AND DYNAMICS

Book Condition: New. Publisher/Verlag: Springer, Berlin | Volume in Honor of the 60th Birthday of J.E. Marsden | Jerry Marsden, one of the world's pre-eminent mechanicians and applied mathematicians, celebrated his 60th birthday in August 2002. The event was marked by a workshop on "Geometry, Mechanics, and Dynamics" at the Fields Institute for Research in the Mathematical Sciences, of which he was the founding Director. Rather than merely produce a conventional proceedings, with relatively brief accounts of research and technical advances presented at the meeting, we wished to acknowledge Jerry's influence as a teacher, a propagator of new ideas, and a mentor of young talent. Consequently, starting in 1999, we sought to collect articles that might be used as entry points by students interested in fields that have been shaped by Jerry's work. At the same time we hoped to give experts engrossed in their own technical niches an indication of the wonderful breadth and depth of their subjects as a whole. This book is an outcome of the efforts of those who accepted our invitations to contribute. It presents both survey and research articles in the several fields that represent the main themes of Jerry's work, including elasticity and analysis, fluid mechanics, dynamical systems theory, g-metric mechanics, geometric control theory, and relativity and quantum mechanics. The common thread running through this broad tapestry is the use of geometric methods that serve to unify diverse disciplines and bring a wide variety of scientists and mathematicians together, speaking a language which enhances dialogue and encourages cross-fertilization. | I Elasticity and Analysis Some Open Problems Finite Elastoplasticity Lie Groups and Geodesics on SL Asynchronous Variational Integrators II Fluid Mechanics Euler-Poincaré's Dynamics of Perfect Complex Fluids The Lagrangian Averaged Euler Equations with Free-Slip or Mixed Boundary Conditions Nearly Inviscid Faraday Waves The Variational Multiscale Formulation of LES with Application to Turbulent Channel Flows III Dynamical Systems Patterns of...
